

Model:S-76

Description:S-76C+ and B model helicopters fly in formation

Model:S-92

Description:H-92 and S-92 helicopter formation

Model:S-70A

Description:S-70A Firehawk drops water from belly tank

Model:S-76

Description:Health Care District S-76C+ Trauma Hawk

Model:S-92

Description:S-92 banks over blue ocean

Model:S-92

Description:S-92 hovers over man in water

Model:S-92

Description:S-92 top view over green forest

Model:S-92

Description:S-92 side view silhouetted against sunset

Model:S-92

Description:S-92 climbs over intercoastal waterway

Model:S-92

Description:S-92 against blue sky from below.

Model:S-92

Description:S-92 side view over countryside

Model:H-92

Description:H-92 military helicopter

Model:H-92

Description:H-92 military helicopter performs rescue hoist. (Artist's conception)

Model:Seahawk

Description:S-70B Seahawk

Model:Naval Hawk
Description:S-70B Seahawk Royal Thai Navy

Model:Naval Hawk
Description:S-70B Seahawk "Glass" Cockpit

Model:Seahawk

Description:SH-60B Seahawk performs a SAR hoist

Model:Seahawk

Description:SH-60B Seahawk with torpedo

Model:H-60

Description:UH-60A Black Hawk string flies over mountains

Model:UH-60L

Description:UH-60L BLACK HAWK departs landing zone over troops and field guns

Whatever your requirements, Sikorsky has a solution. We offer a wide variety of mission configured aircraft derived from our five basic models: the S-76™, S-92™, BLACK HAWK, SEAHAWK® and CH/MH-53E helicopter, as well as the Schweizer 330 and 333 helicopters and RU-38B and SA-237B reconnaissance airplanes.

S-76

It could be shuttling executives to a downtown business meeting, rotating an oilrig crew from a platform in the North Sea, rushing an accident victim to the emergency room or rescuing victims from typhoon state seas. With over four million flight hours accumulated by more than 600 aircraft, operators in over 38 countries use their S-76 helicopters for these missions and many more. **S-**

92

Sikorsky is once again revolutionizing the industry with the introduction of the S-92 helicopter. The S-92 breaks new ground for helicopter operations by providing unprecedented levels of reliability, safety and availability. Designed to the latest criteria mandated by the FAA and JAA, it offers a full six feet of headroom and plenty of cargo space for missions including offshore oil support, Executive Transport, Search and Rescue and Airline.

Schweizer Products

Schweizer Aircraft is a diversified aerospace company, globally recognized for its industry-leading aircraft products. Over five thousand eight hundred (5800) sailplanes, helicopters, agricultural aircraft, and reconnaissance aircraft have been designed and manufactured by Schweizer Aircraft. Today, they are operated in more than seventy countries around the world

Schweizer manufactures three proprietary helicopters: the piston-powered Model 300C and 300CBi helicopters and the turbine-powered Model 333. These exceptional products fill import and niches in the helicopter market place and are known for their exceptional flight properties, safety, versatility, and cost effectiveness.

Schweizer manufactures two types of covert reconnaissance aircraft: the SA 2-77B and RU-38B. These aircraft are unique in their ability to detect and monitor activity on land or sea without detection from below. They are used by domestic and international customers for critical surveillance roles and routinely carry FLIR, EO, and electronic sensors.

BLACK HAWK

The world renowned BLACK HAWK is the U. S. Army's premiere combat tactical transport helicopter. Known for its ruggedness and performance, more than 2,000 BLACK HAWK derivatives are at work with every branch of the U. S. Military and with more than 22 international operators. Some of its many roles include: troop assault, medical evacuation, cargo delivery, search and rescue, fire fighting, special operations and VIP transport. Sikorsky is currently entering a new phase with the U.S. Army with the introduction of the UH-60M.

SEAHAWK

A derivative of the BLACK HAWK, the SEAHAWK family of naval helicopters was developed to satisfy a broad range of ship and land based maritime requirements around the world. Deploying quickly from carriers, cruisers, destroyers or frigates, SEAHAWKS have the speed, payload and endurance necessary to comb the sky, surface and under the sea for information that is vital to naval forces operations. Almost 600 Naval Hawks are in service today with the U. S. Military and the navies of seven other nations. Sikorsky is currently in production with its MH-60S naval utility helicopter and is introducing the MH-60R anti-submarine warfare aircraft to the U.S. Navy.

CH/MH-53E

The more than 230 delivered CH/MH-53E helicopters are the U. S. Military's most powerful. The Marine Corps CH-53E can haul 16 tons for 50 nautical miles or lift a 155mm howitzer plus its crew and ammunition. From ship to shore or ship to ship, whatever needs to be carried, the 53E can get it there.
