Model Number: V-50 Model Name: Corsair Model Type: Observation

This aircraft was built in 1931 as a demonstrator and to promote export sales of the 03U. It also served as an executive airplane and flew in several airshows. With its supercharged Pratt & Whitney "Hornet" engine, it outperformed the 03U-1.

1 flex machine gun in rear cockpit
Provisions for racks on lower wings

Model Number: V-65B, C, C1, F

Model Name : Corsair Model Type: Observation

All V-65's were basically SU-2 aircraft. Thirty-seven V-65B's were built in 1933 and exported to Brazil. The first flight of the V-65C was in 1933. Forty-two of these aircraft were exported to China. The V-65C1 and V-65F were built in 1933 and 1934. Eleven of the V-65C1's were land planes and four were equipped with floats. These aircraft were exported to China and Argentina.

Model Number: V-66B Model Name: Corsair Model Type: Observation

Soon after the Brazilian Air Force order for the V-65, the Brazilian Navy ordered eight seaplanes. The seaplane version was designated V-66, since it was an updated version of the V-65 in addition to being a float airplane. However, the V-66 designation was then used for all subsequent export models of the SU and O3U aircraft.

## 1 flex 7 mm Colt machine gun in rear cockpit Provisions for bomb racks on lower wings

Model Number: V-70 Model Name: Corsair Model Type: Observation

Originally built for an Army Attack Program, it was converted into an engineering test bed and then into a demonstrator and finally was used as a company executive aircraft. This was the first Vought aircraft to have an enclosed cockpit.

## **UPDATE 2004**

Our records for the V-70 end with its use as an executive aircraft. However, information

It was then flown to the San Javier Naval Base and configured as a seaplane. The Navy pilots at the base made several flight tests. On

30 April 1935 Navy Lieutenant La Cierva with Chief Naval Aeronautical Engineer Nardiz as observer flew it. The flight was made to conduct a high altitude performance test. Shortly after reaching the designated altitude, the V-70 caught fire and crashed about 300 meters from the beach, resulting in the death of both occupants. No cause for the accident was determined, but a carburation failure at high altitude was suspected.

Prior to the Spanish Civil War, Naval aviation was the Air Army of the Spanish Fleet, but was disbanded during the Civil War.

Model Number: V-80, F, P Model Name: Corsair Model Type: Fighter

The V-80 was built as a demonstrator of a single-seat fighter export version of the 03U-4 with four forward-firing machine guns and an enclosed cockpit. Three V-80P's were sold to Peru and one V-80F to Argentina. The payment for the Peruvian aircraft was made in guano since the country was bankrupt. How, and to whom, the fertilizer was sold is not clear but company books show that payment was received. The demonstrator was later converted to the V-135.

Model Number : V-93S Model Name : Corsair Model Type: Fighter

The V-93S was a modified model of the Vought O3U-6. The V-93S was sold to Siam, in 1934, for

Landplane

use as a two-place fighter aircraft. Twelve of the V-93S aircraft were manufactured by Vought. The last four had provisions for four Vickers machine guns. All armament installations were made by the Siamese. Seventy two additional V93S aircraft were manufactured by the Siamese under license. The quantity equipped with floats by the Siamese is unknown.

**Model Number :** V-135 **Model Name :** Corsair

Model Type: Scout, Observation

The V-135 airplane is basically a V-80. One was used as a test bed by Pratt & Whitney and one airplane was sold to the state of Connecticut in 1935 to replace the 02U that they had purchased earlier.
